Reverse IP Lookup

[Tweet](#) 

Ever wonder which other websites use the same hosting resources you do? Could they be impacting your site's performance? Use our patented Reverse IP Address Search tool to get a list of the domains currently hosted at any given IP address.\*

Reverse IP Lookup returns up to 2,000 domains hosted on a single IP, including all the common gTLD and any ccTLD domains. For more popular IPs with more than 2,000 domains, order a Reverse IP report and we'll deliver it to you in minutes. Reverse IP reports are a useful tool to sort, parse and review large lists of domains.

Reverse IP Lookup is an incredibly powerful tool with many high-value business applications.

- Retrieve a list of all domains using the same IP address as you, and sharing the same resources
- Track down malicious behavior of phishing or scamming websites that reside on the same host.
- Perform research on hosting or parking companies before you decide to make a switch.

IP Address or Domain Name

\* Reverse IP Lookup will return a list of a) all gTLD domains, and b) all ccTLD domains added to the subject IP address after our earliest record update for that IP address. Results will include any domain added within the previous 24 hours, but may not reflect any domains removed from that IP address within the last two weeks. Reverse IP Lookup results include the first 2,000 domains ordered alphabetically. For IP addresses hosting more than 2,000 domains, purchase of a Reverse IP Report is required to view all results.
